Office Action Summary	Application No.	Applicant(s)	
	10/688,900	DAVIOT ET AL.	
	Examiner	Art Unit	
	Shamim Ahmed	1765	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 04 April 2005.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-31 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-31 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All b) Some * c) None of:
1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.
2. In the following rejections, the limitation under the heading or "optionally" is not given patentable weight because they are optional to be present in the composition.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
5. Claims 1-13, 17-23 and 24 -28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Leon et al (6,030,932) in view of Gogg et al (6,686,297).

Leon et al disclose a cleaning composition comprises water, alkaline compound such as hydroxylamine or quaternary ammonium hydroxide, a fluorine-containing compound such as ammonium bi fluoride (col.4, lines 31-59 and col.5, lines 25-27).

Leon et al also teach that controlling of pH in the range of 2-9 is critical (col.5, lines 13-21 and col.6, liens 30-35).

Leon et al fail to disclose that the composition comprises phosphoric acid.

However, in a cleaning composition, Gogg et al teach that additives such as phosphoric acid can be added for adjusting pH to a desired value of the cleaning liquid and thereby increasing the effectiveness of the cleaning or treatment liquid (col.3, lines 51-57).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of claimed invention to modify Leon et al with Gogg et al by introducing phosphoric acid in order to efficiently controlling or adjusting the pH of the cleaning composition for increasing the effectiveness of the cleaning composition as taught by Gogg et al.

As to claim 2, Leon et al teach that the pH of the composition is maintained in the range of 2-6 (col.5, lines 13-21).

As to claims 7-9, Leon et al teach that the cleaning composition also includes other acid compounds such as lactic acid as corrosion inhibitor, wherein the corrosion inhibitor content is in minor amount (col.6, lines 5-11).

As to claims 10-11, Leon et al teach that the composition also comprises fluoride-containing compound such as ammonium bi fluoride of about 0.5 to 10% by weight (col.4, lines 50-59).

As to claims 17-23, it would have been obvious choice to one of ordinary skilled in the art that the cleaning composition will include or exclude the claimed constituents depending on the types of residue to be cleaned.

As to claims 24, 25,27, Leon et al teach that the concentration of hydroxylamine is in the range of 0.1% to 10% (col.5, lines 45-48) and the composition may include a quaternary ammonium hydroxide (col.6, line s13-18).

Leon et al fail to disclose the exact concentration of the claimed compounds but it would have been obvious to optimize as the optimization of a result effective variable involves only routine skill in the art.

6. Claims 1-5,7-8,14 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Herdt (6,121,219).

Herdt disclose an aqueous cleaning composition comprises a mine or a quarternary ammonium compound, phosphoric acid, or in combination of organic acid of citric acid, surfactant and organic solvent with a pH ranging 1-5(col.2, lines 35-55, col.3, lines 7-36, col.7, lines 21-31 and col.7, line 63-col.8, line 10).

7. Claims 1,14-16,24-25 and 30-31rejected under 35 U.S.C. 103(a) as being unpatentable over Skee (6,599,370).

Skee discloses a composition for cleaning microelectronic substrate, wherein the composition comprises water, suitable bases such as a quarternary ammonium hydroxide or organic amines (alkanoamines), surfactants (col.9, lines 17-25), organic

solvent (col.9, lines 1-15) and phosphoric acid (col.6, lines 26-28, lines 41-col.7, lines 20 and lines 34-40).

Skee also discloses that phosphoric acid is in the range of 0.1-about 3.0% by weight in combination of a quarternary ammonium hydroxide such as tetramethyl ammonium hydroxide (TMAH) (col.10, lines 5-10).

8. Claims 30-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Skee (6,465,403).

Skee discloses a composition for cleaning microelectronic substrate, wherein the composition comprises water, suitable bases such as a quarternary ammonium hydroxide or organic amines (alkanoamines), surfactants (col.6, lines 29-col.7, lines 65) and phosphoric acid and furthermore, oxalic acid dehydrate may be added to th ecomposition (col.48, lines 15-24).

9. Claims 1 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Darmon et al (5,262,285).

Darmon et al teach a composition comprises about 5 to 300 g/l of phosphoric acid, about1 to about 100 g/l of hydroxyl amine and balance of water (see abstract).

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Vaartstra (6,149,828) discloses the use of combination of phosphoric acid and TMAH in a cleaning composition.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shamim Ahmed whose telephone number is (571) 272-1457. The examiner can normally be reached on M-Thu (7:00-5:30) Every Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nadine G. Norton can be reached on (571) 272-1465. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
